Are you looking to mitigate the risk of lightning?

Lightning damages can reach up to 1.5 M€ for a wind turbine per lightning event ...

Leader of lightning detection and mitigation in Europe, Météorage, provides lightning risk prevention services to **2700+ companies** and numerous sectors (wind turbine, network, aviation, national meteorological services, etc.).

The French company detects **> 98% of lightning flashes in Europe with a median detection accuracy of < 100 meters.**

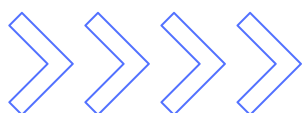

Outside Europe, Météorage provides the same services using the GLD360 network.

Météorage helps wind energy actors to:

≤ Evaluate the lightning risk on the site by measuring the level of risk during the site assessment,

- ≤ Ensure safety of personnel, secure operations, and limit business interruption with alerts (with start/end-of-alerts) when a storm approaches,
- ≤ Limit damages by carrying out checks and proactive maintenance with precise reports,
- ≤ Guarantee productivity by reducing downtime through faster and more efficient problem identification and repair,
- ≤ Integrate our lightning data streams into their tools (SCADA).

"The live monitoring of lightning, the alerts for strikes and high wind & storm forecasting offered by Météorage allows us to ensure we are providing the very best in health and safety planning and monitoring." **VENTIENT ENERGY**

Interested to know more? Meet Météorage at WindEurope **during the "French Pavilion" cocktail on Tuesday, April 25 at 5 PM (request your invitation to Sabrina) or at Booth B30-G (hall 3).**
