

Floating wind value chain in Spain: the key to the Iberian market

March 21st, 2024
BEC! - Level 5 Room 1B

Spain has a goal of reaching 3 GW of floating wind power in 2030. Key to achieving this milestone will be the involvement of the local value chain. With significant experience in the international development of offshore wind energy, this workshop will provide a quick overview of the market status in Spain, as well as of its main industrial regions and key players, both in floating foundation technologies and in manufacturing capabilities.

15:00 - Status of the Spanish market and new regulatory framework for offshore wind (AEE)

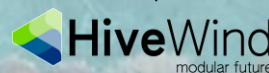

15:15 - Three strategic industrial regions in Spain for floating wind development:

- Floating Wind Basque Country
- Supercluster Atlantic Wind
- Cluster Marítimo de Canarias

15:45 - Pitch presentations of floating foundation developers

ferrovial

FLOATING POWER PLANT

16:45 - Pitch presentations of floating wind key suppliers

17:00 - Networking and cocktail at the Wind Energy Basque Country pavilion
