

## Ramboll's wind energy services empowering Spain's renewable future

Madrid, March 13, 2024

*With its comprehensive wind energy services, Ramboll is driving sustainable solutions to harness Spain's wind power potential and contribute to the country's clean energy transition.*

The recent release for public consultation of the regulation for the deployment of offshore wind projects by the Spanish government sets the stage for significant progress and confirms the country's commitment to renewable energy. Ramboll's growing team in Spain, with 100 environmental and wind experts located in Madrid and Barcelona, positions the company as a key player in advancing the nation's renewable energy goals.

Lorena Tremps, Head of Wind Advisory, Mediterranean, says: "As most of the offshore wind projects in Spanish waters will need to be built with floating foundations, the development of floating technology is pivotal for the future of offshore wind in the country. Ramboll has a dedicated team of floating wind experts who provided independent engineering consultancy services in more than 80 commercial and R&D projects globally so far."

Ramboll's wind energy services offer a holistic approach to wind farm development, encompassing every stage of the project lifecycle. From initial site assessments and feasibility studies to design, engineering, and construction support, Ramboll's multidisciplinary team delivers tailored solutions that optimize energy production and minimize environmental impact. Implementing options that comply with social and environmental regulations is our priority and part of our sustainability approach.

### About Ramboll's Wind division

Ramboll is a world leader in offshore wind with a unique value proposition. The company has been involved in more than 60% of all operating offshore wind farms globally. With international, multidisciplinary and wind energy specific competencies, Ramboll is a true full-range service provider for offshore wind energy projects in all its phases. Ramboll supports clients globally to identify, evaluate and quantify both risks and opportunities, allowing them to make well educated, strategic decisions based on practical offshore wind project development, financing and execution experience, combined with world-class engineering know-how.

### About Ramboll

Ramboll is a global architecture, engineering and consultancy company founded in Denmark in 1945. Ramboll's 18,000 experts create sustainable solutions across Buildings; Transport; Architecture & Landscape; Water; Environment & Health; Energy and Management Consulting.
