

WindEurope press trip

Bilbao, Wednesday 3 April 2019

Agenda

08:30 Pick-up at Bilbao centre
09:00 Visit to INGETEAM headquarters
11:00 Bus to VICINAY Sestao factory
11:30 Visit to VICINAY Sestao
13:00 Bus to Bilbao
13:30 Arrival at Bilbao centre

Ingeteam

Ingeteam is an international group specialised in control & power electronics (inverters, frequency converters, controllers and protections) as well as in automatisisation and electric engineering. Its range of products includes generators, electrical motors and submersible pumps (under the Indar brand). The company complements its products and systems with operation and maintenance services in power generation plants. In the wind sector, the Ingeteam group offers solutions for wind turbines of up to 15 MW, including power converters, generators, control systems, CMS, life extension systems, Ingeboards, smart SCADA management systems, and O&M services. It has manufacturing sites in Spain, USA, Brazil, Mexico and India, allowing Ingeteam to be a global supplier.

The visit will take place in the **power electronics lab**, located at Ingeteam Power Technology premises in the Bizkaia technology park. It is a pioneer laboratory, where **state-of-the-art power electronics and rotating machines technologies are validated**. These facilities allow Ingeteam to simulate power and voltage levels similar to real life conditions, optimising achieved results. Taking the opportunity of the WindEurope Conference & Exhibition, Ingeteam has built a showroom to show the group's technology capabilities in the wind sector.

Vicinay

Vicinay Marine is the world leader in the supply of mooring solutions for the offshore industry. By placing HSE and product quality as top priorities, Vicinay Marine is recognised and respected by

leading companies across our sector. Our long and proven experience enables us to provide innovative solutions to make floating offshore wind a relevant player in the global energy mix now and in the future.

As part of our compromise with this promising market, Vicinay Marine built in 2013 **the most advanced mooring chain manufacturing facilities worldwide**. This important milestone has reinforced the Basque Country as one of the key players in the offshore wind industry
