

**EPSILINE : Right Measure, Right Price**

EPSILINE is pleased to announce several **new developments** concerning the application of its **wind LiDAR** for **wind turbine power monitoring and optimisation**. A **new sensor** to measure the ambient **pressure, temperature and humidity** at hub height is included. Using this data with wind speeds measured by the **wind LiDAR** and the active power from the turbine, the operator will be able to **permanently consult** an online, User-Friendly interface for **reporting and evaluating the performance of the wind turbines**.

EPSILINE also announces a **new commercial offer** of its **LiDAR**, making it one of the **most competitive, most versatile** and **precise independent wind measurement systems** in the market.
