

## Press-release

# How Endiprev's experience and expertise can address the needs of European offshore wind technology

## Porto, Portugal

Endiprev has been extremely involved in the offshore industry, since 2013, by continuously participating in test and validation projects of new machines, as well as the maintenance and commissioning of offshore wind farms.

The company is the only wind power contractor to perform in the commissioning and maintenance of offshore wind farms in three continents: Europe, America, and Asia. With more than 200 technicians and engineers on the field, the company has a track-record experience in more than 30 countries worldwide. With their expertise on the [European offshore industry](#), the company counts with projects in the North Sea, near Germany, Denmark and Belgium (Ostend Offshore Cluster). Due to its [vast experience in Europe](#), Endiprev was one of the partners chosen to assist in the commissioning and maintenance services on the [Block Island Offshore Wind Farm](#), the first offshore wind project in the United States.

Endiprev works directly for OEMs, building relationships of trust and cooperation. To do that, the company understands that managing increasingly large projects and turbines require a well prepared and experienced partner, on the technical duties and the management sites. Endiprev has both a highly skilled technical staff as well as the management team to execute the projects worldwide. The company's teams are professionals with engineering and technical training in various fields, such as mechanics, electricity, or information systems, specially prepared for the new offshore technology.

**If you want to know more about Endiprev's work, you can go to their stand 3-A47 at WindEurope Offshore 2019.**

## Note to editor

Endiprev is an international reference in the provision of specialized services, project commissioning, preventive maintenance, as well as corrective and major corrective measures, involving onshore and offshore wind energy equipment.

The company works all over the world in close partnership with the main manufacturers of wind turbines (OEM).

Endiprev has experience in more than 30 countries and offices in eight countries: Germany, China, Spain, United States, Ethiopia, Holland, Portugal and Sweden and we are prepared for any challenge.
